

ABSTRACT OF THE DISCLOSURE

In one embodiment, a liquid or flowable cleansing or skin treatment composition is described which is substantially nonaqueous and which has a continuous and a discontinuous phase. Components of the discontinuous phase can chemically react with each other or with water when water is blended with the nonaqueous cleansing or skin treatment composition during consumer use. In a second embodiment, a solidified cleansing or skin treatment composition is described which contains components that can chemically react with each other or with water when water is blended with the solidified cleansing composition during consumer use. Methods for treating the skin with the inventive compositions are also described.
